Profile

"A passionate student and software developer, I combine user interface (HTML/CSS) building skills with strong programming logic and problem-solving abilities using C++ and Java. I have a background in artificial intelligence and machine learning concepts, and I always strive to employ these diverse technologies in building smart, innovative, and user-friendly applications and solutions."

Education

Bachelor's Degree in Computer Science and Information Systems at Al-Azhar University, Cairo, Egypt **September 2025 - Present**

Grade: 3.5

Computer Science student at Al-Azhar University. Deeply focused on algorithms, software engineering, and core computing principles. Actively applying my academic knowledge to build projects using Java, C++, HTML, and CSS, while expanding my expertise in foundational Artificial Intelligence and data structures.

Certificate in Software Development and C++ Programming at Tech- B E, Cairo, Egypt **November 2025 - January 2026**

Grade: Excellent

Successfully completed intensive training focused on Software Development and technical foundations. Acquired practical expertise in programming logic using C++ and Java, while mastering core concepts of Artificial Intelligence, machine learning, and data analysis.

- "Earned a technical certification in programming logic and software foundations, successfully mastering core concepts of C++, object-oriented programming, and fundamental Artificial Intelligence principles."
- "Successfully completed an intensive software development training program, gaining practical experience in building computational logic with C++ and developing structured programming solutions."

Experience

Frontend Web Developer (Project-Based) at [Responsive Restaurant Website Project](#), Cairo, Egypt **February 2026 - February 2026**

Designed and developed a fully responsive restaurant website from scratch using semantic HTML and custom CSS layouts. Structured modern web pages including menus, about sections, and contact forms using CSS Grid and Flexbox, ensuring seamless responsiveness and an optimal user experience across mobile, tablet, and desktop devices without external frameworks.

- "Created an intuitive and visually appealing user interface optimized for cross-browser compatibility and clean code."

Internships

Software Development Trainee at Digital Egypt Pioneers Initiative (DEPI), Cairo, Egypt **June 2026 - Present**

Engaging in intensive technical training focused on software development methodologies and quality assurance frameworks. Strengthening hands-on coding expertise in object-oriented programming with Java and C++, while studying core concepts of software testing, responsive web structures, and computing foundations.

- "Actively preparing and qualifying through technical assessments in advanced software tracks."

Skills

c++ Programming: Proficient in programming logic, object-oriented programming (OOP) principles, and solving complex computational and mathematical problems.

Java Programming: Solid understanding of core Java concepts, object-oriented structure, and building structured software logic.

Web Development (HTML5 & CSS3): Experienced in structuring semantic web pages and creating fully responsive user interfaces using custom CSS Grid and Flexbox layouts.

Artificial Intelligence (AI) Foundations: Knowledgeable in foundational AI concepts, machine learning data types, and core theoretical principles

Projects

Responsive Restaurant Website • [project link](#)

February 2026 - February 2026

A personal web development project designed to create a modern, visually appealing, and fully responsive landing page for a restaurant. Built completely from scratch using semantic HTML for structural integrity and custom CSS Grid and Flexbox for advanced layout positioning. The project demonstrates a strong focus on responsive design principles, ensuring a seamless and optimal user experience across desktop, tablet, and mobile devices without using any external UI frameworks.

- Successfully achieved 100% responsive layouts across all device screen sizes with clean, framework-free CSS."

Information Card • [information](#)

December 2025 - December 2025

Interactive Information Card Component Designed and developed a sleek, responsive information card component using semantic HTML5 and custom CSS3. Focused on implementing clean typography, precise layouts, hover effects, and visual hierarchy to display personal or profile data elegantly across all screen sizes.

- Successfully built a 100% responsive interface from scratch, achieving zero layout shifts across mobile, tablet, and desktop viewports using pure CSS Grid and Flexbox.

Languages

Arabic - Native

English - Basic

Certificates

AI for Business Professionals from HP LIFE • [Link](#)

May 2026

Gained a foundational understanding of artificial intelligence concepts, including generative AI and machine learning, while exploring its data requirements, practical workflow tools, and ethical considerations
